# Introducing FileMaker Pro

# Agenda

- What's a database?
- What's been used in the past?
- What's available today?
- What's so great about FileMaker?

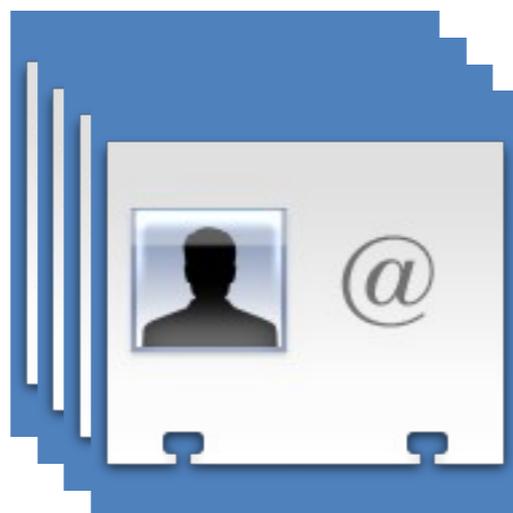

# This is a database?

- ✦ It contains information
- ✦ It's not well organized
- ✦ It isn't user-friendly
- ✦ It's pretty ugly
- ✦ It isn't digitized
- ✦ It's difficult to query
- ✦ Generating a report is nearly impossible

# What's a database

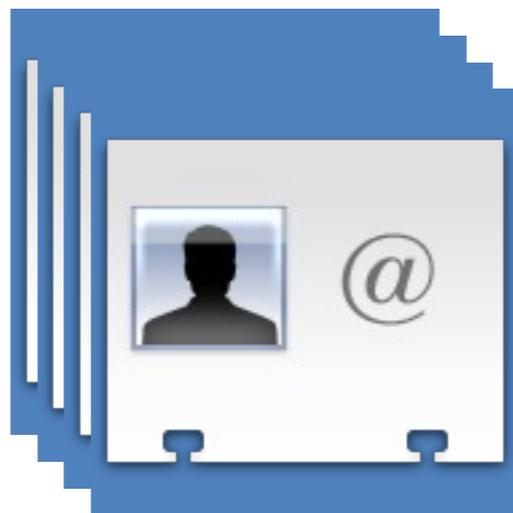

- A container
- Multiple records
- Similar types of information

*A database is a method of organizing and analyzing information*

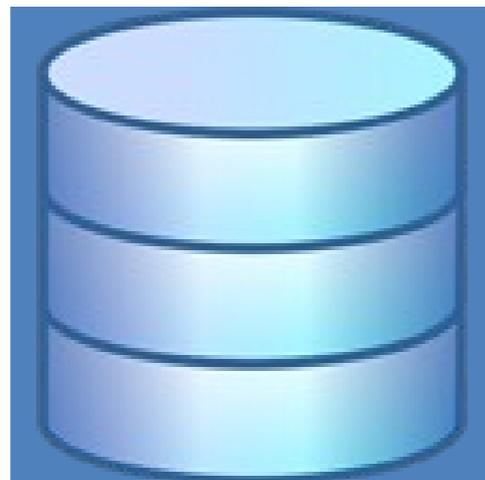

# What's a database

- Card catalog at library
- Recipes in a book in kitchen
- Business cards on a desk

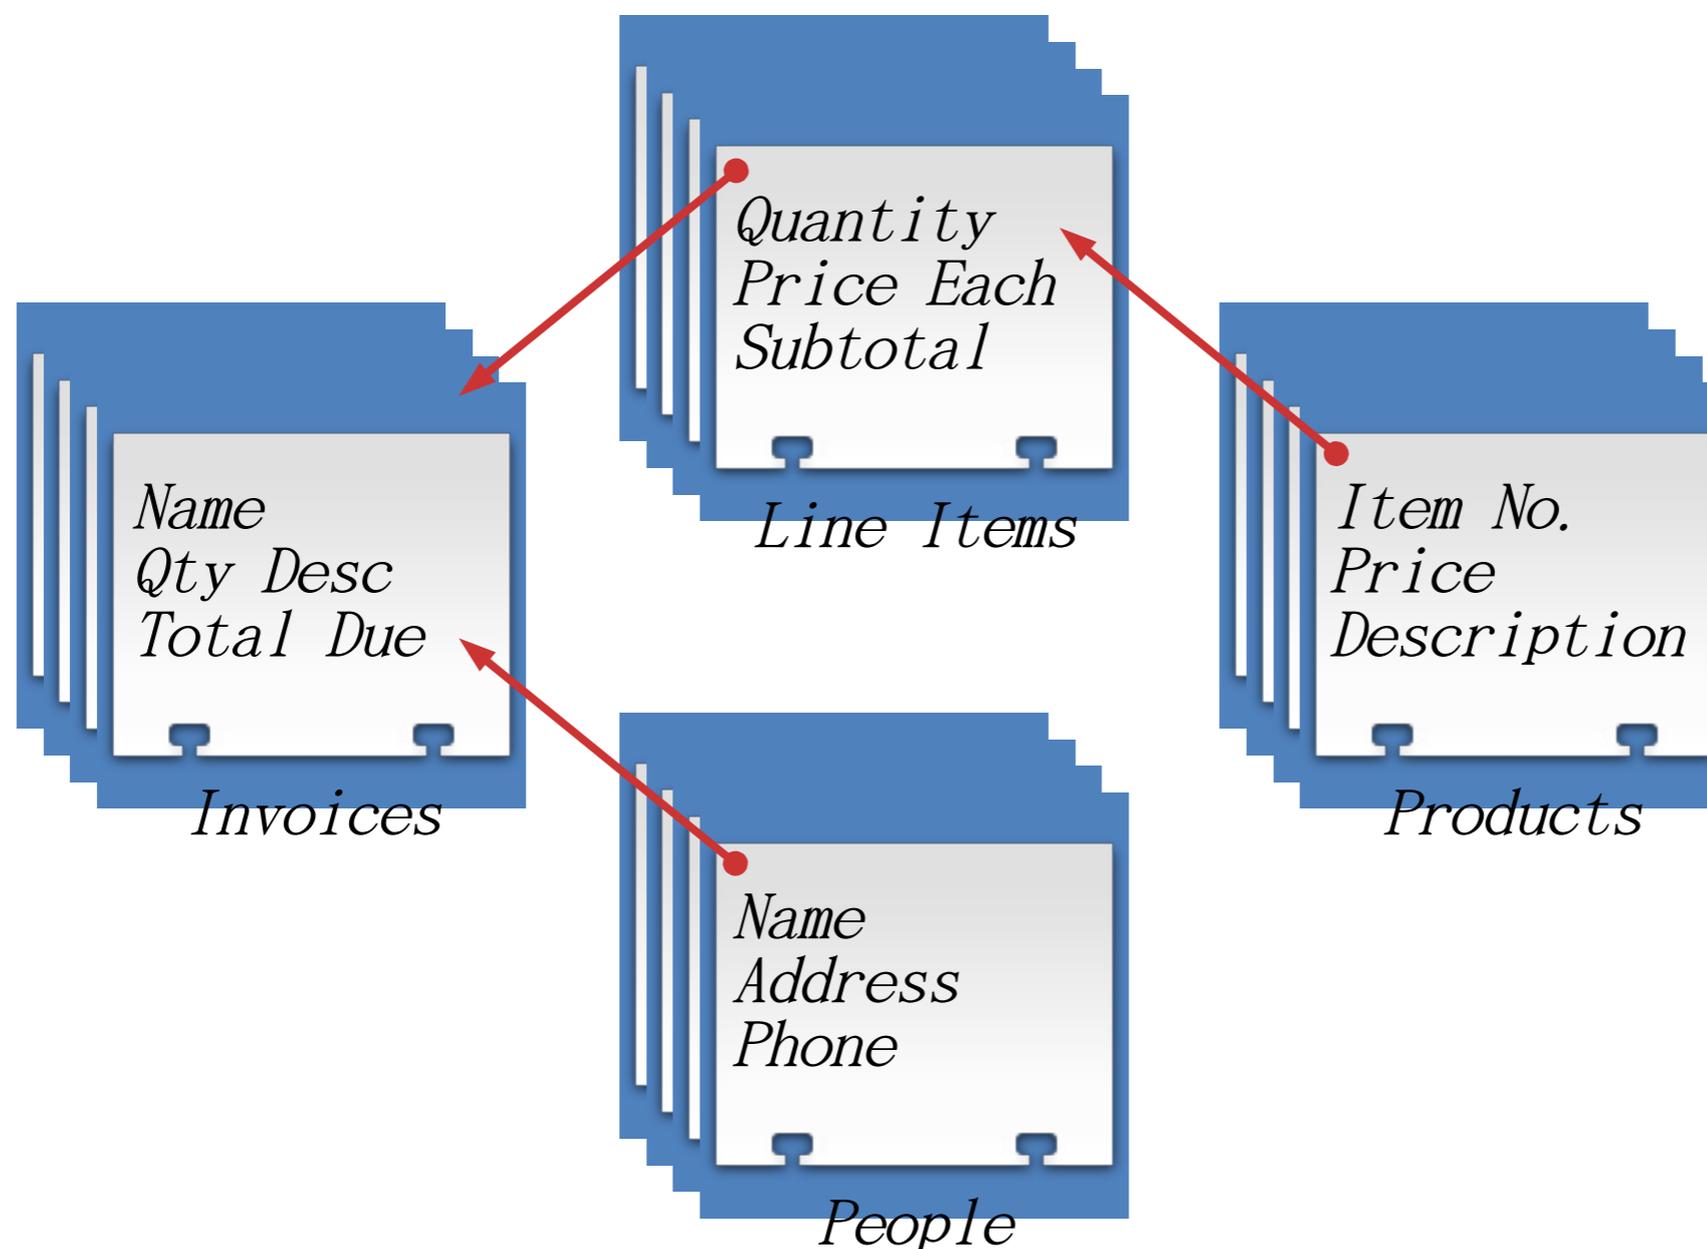

# What's a database

- ✦ Flat-file - one data table, like a computer worksheet
- ✦ Relational - data tables related in some manner

# What's a database

A system of  
databases helps you  
integrate all this  
information  
so you stay  
organized,  
efficient,  
more organized and  
productive, and  
productive.  
profitable.

# The Past - c. 1987

- \* PFS File
  - \* dBase III
  - \* AppleWorks
  - \* FoxBase
  - \* FileMaker
- Flat - DOS, Apple II
  - Relational - DOS
  - Flat - Apple II or Mac
  - Relational - Early
  - Windows on Mac

# Today

- \* Microsoft Access
  - Windows, difficult
- \* Bento by FileMaker
  - Mac, easy
  - X-platform, no GUI
- \* SQL (many flavors)
  - Support intense, \$  
\$\$
- \* Oracle or Sybase
  - X- platform, GUI, scalable, \$
- \* FileMaker Pro

*Cross-platform computer  
support and data management  
solutions*

114 Ambling Way

bsonger@songerconsulting.net

# Why a Database

*• Instead of a Spreadsheet*

# Comparison

Since both spreadsheets and databases have tables, why should I use the latter?

Reference Point	Excel	FileMaker
Numbers, labels, calculations, etc	✓	✓
Data integrity		✓
Form and report views		✓
Data saved record by record		✓
Multiuser aware		✓
Sharing, personal or server		✓
Web accessible		✓

# Going Deeper

Reference Point	Spreadsheet	Database
Use of memory	Data and calculations are RAM resident, if a file is not saved data is lost if power is lost to the computer.	Uses both RAM and hard drive memory, with most databases data is saved to the hard disk as soon as a the user leaves the record.
Organization of Data	Data cells are independent, formulas can specify specific cells by name. Formulas access one cell at a time.	Data is organized by fields or records. Formulas or queries work on specified fields in a record, or on selected fields for all specified records.
Calculations	Fast Setup is easy Wide selection of financial and statistical functions	Usual calculations for data such as basic arithmetic. Custom calculations may be created in which results are by text, number, date, plus other types supported.

# Going Deeper

Reference Point	Spreadsheet	Database
Charts	Wide choice of charts and graphs. Easy to setup and easy to change.	Data can be exported to spreadsheet to do a chart.
Reports	WYSIWYG, prints tables as are. It is possible to link multiple spreadsheets, but databases make this far easier.	A report does not need to look like the table, each field can be placed anywhere on the form, and used multiple times. It is easy to combine data from more than one table into one report.

# Going Deeper

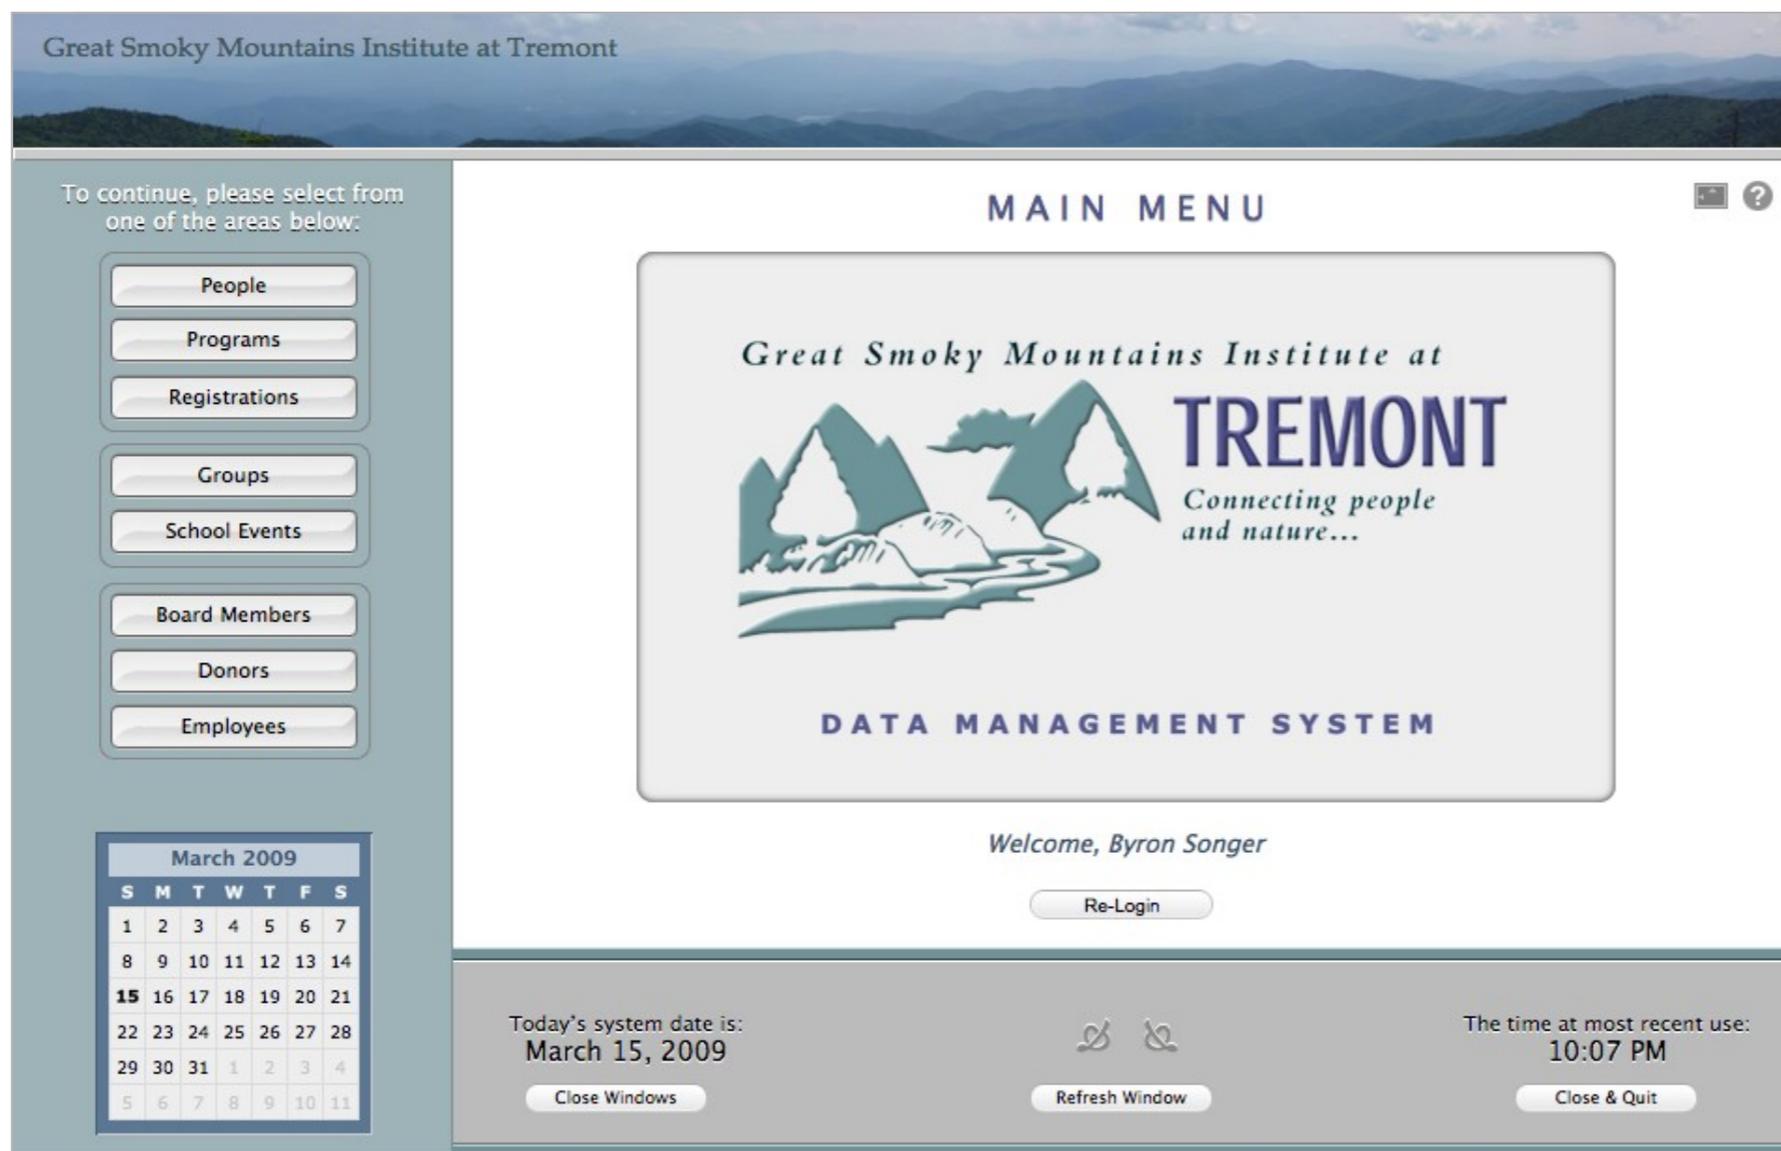

Reference Point	Spreadsheet	Database
Data Entry	<p>Has limited ability to design forms and create “look up” tables. (A look up table provides options from which the data enterer can select.). Not as easily done, or as flexible in this area as a database.</p> <p>Some validity checks possible.</p>	<p>Possess excellent ability to design special forms that show only fields needed and include instructions on how to enter the data. Can also contain read only fields.</p> <p>Forms can show only one record, or multiple records.</p> <p>Can also contain fields from more than one table.</p> <p>It is easy to provide validity checks on data to prevent some erroneous data by using look-up tables, drop down menus and other data validation features.</p>
Programming Languages	<p>Terse - hard to document and hard to read</p> <p>Hard to debug</p> <p>Suitable for short subroutines or macros</p>	<p>Full featured programming language with excellent documentation and debugging capabilities.</p>

# Going Deeper

Reference Point	Spreadsheet	Database
Queries	Limited queries especially for multiple tables.	Can perform very complex data queries on one or multiple tables. Can use set theory.
Relational Tables	Can link spreadsheets, but has more limitations.	Links many different tables easily so appear to user as one table. Very useful in transforming complex data.

# Some Examples

People, registrations, events, giving, employee, and board. 267 layouts, 18 tables, 816 fields, tabbed and color-coordinated interface, menu for launching modules, secure login by account.

Great Smoky Mountains Institute at Tremont

To continue, please select from one of the areas below:

- People
- Programs
- Registrations
- Groups
- School Events
- Board Members
- Donors
- Employees

# In Review

- \* Spreadsheets are for numbers – databases are for managing information
- \* Personal use or business deployment
- \* OS-specific or cross-platform
- \* Steep learning curve or ease-of-use with room to grow

# With FileMaker Pro

- *Manage people, projects, assets and more – the easy way!*
- ✦ Helps anyone with any type of task get things done quickly.
- ✦ Mac or Windows user – you can create and share information through a network, over the web, or in popular formats such as PDF.
- ✦ Rely on FileMaker Pro to effortlessly manage and share information.

# et Started Quickly

- *With the award-winning ease of use built into every aspect of FileMaker Pro 10, installation and setup takes just a matter of minutes.*
  - *Drag and drop Microsoft Excel spreadsheets into FileMaker Pro to create databases instantly.*
  - *Learn how to use FileMaker Pro with the new "See it - Use it - Learn it" Quick Start Screen.*
  - *Choose from 30 ready-to-use Starter Solutions and 25 themes to create*

# Reporting Made Easy

- *Comes complete with step-by-step reporting tools that help you (and your colleagues) make sense of all your data and automate those repetitive tasks.*
  - *Create reports in minutes showing summaries, sub-summaries, grand totals, etc.*
  - *Tools to help you create database reports with information from back-end systems such as SQL Server, Oracle, or MySQL.*
  - *Publish your reports in popular formats*

# Share in a Few Clicks

- *Safely share FileMaker Pro 10 databases with both Windows and Mac users. Plus, control what data you let other people see - right down to a specific field.*
- *Share your database with other FileMaker Pro users simultaneously through computers connected to a network.*
- *Publish information to the web and collaborate with colleagues.*
- *Create live two-way connections with external SQL data sources*

*Cross-platform computer  
support and data management  
solutions*

# Getting Started with FileMaker Pro

•  
•

# Four Methods

- ✦ Start from scratch
- ✦ FMP-supplied Starter Solution
- ✦ Developer
- ✦ Excel conversion (assumes use of normalized data)
  - ✦ Rows to records
  - ✦ Columns to fields

# Scratch

- Longest and hardest way
- Yields exact results, e.g., you get what you want
- Most expensive in terms of your time
- Example - a simple database to track items

# Starter Solutions

- \* Pre-made templates from FileMaker
- \* Quick, ready-to-go databases with appropriate design elements
- \* You supply the data,
- \* Can be freely edited - all design aspects
  - \* Add layouts
- \* Change field names
  - \* Get creative
- \* Modify scripts

# Developer

- \* The task is beyond your level for developing an integrated database solution
- \* You “spec” the requirements, let the developer create/maintain/upgrade
- \* Custom, run-time solutions; no FMP license required

*Cross-platform computer  
support and data management  
solutions*

# Database Concepts

*•Understanding the Essentials Leads  
to Success*

# Table

- Standalone table
- Multiple tables relate to each other
- The table defines the structure of what will be stored, the pieces of data you need to track

First Name	Last Name	Street	City	State	Postal

# Record

- Unique instance of information
- Collected data defines the record, a single entity
- In a spreadsheet, a row under the column headers.

Byron	Songer	114 Ambling Way	Louisville	KY	40254
-------	--------	--------------------	------------	----	-------

# Field

- A particular piece of data
- Data may be by type (text, number, date, time, container (for multimedia), calculation, summary)
- In a spreadsheet, a field is a cell

Byron	Songer	114 Ambling Way	Louisville	KY	40254
-------	--------	--------------------	------------	----	-------

# Graphical Review

• *A database consists of -*

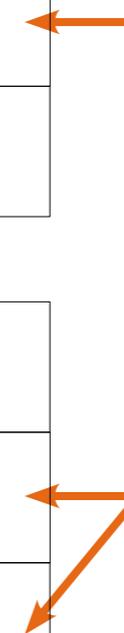

• *Fields*

• *Records*

• *Tables*

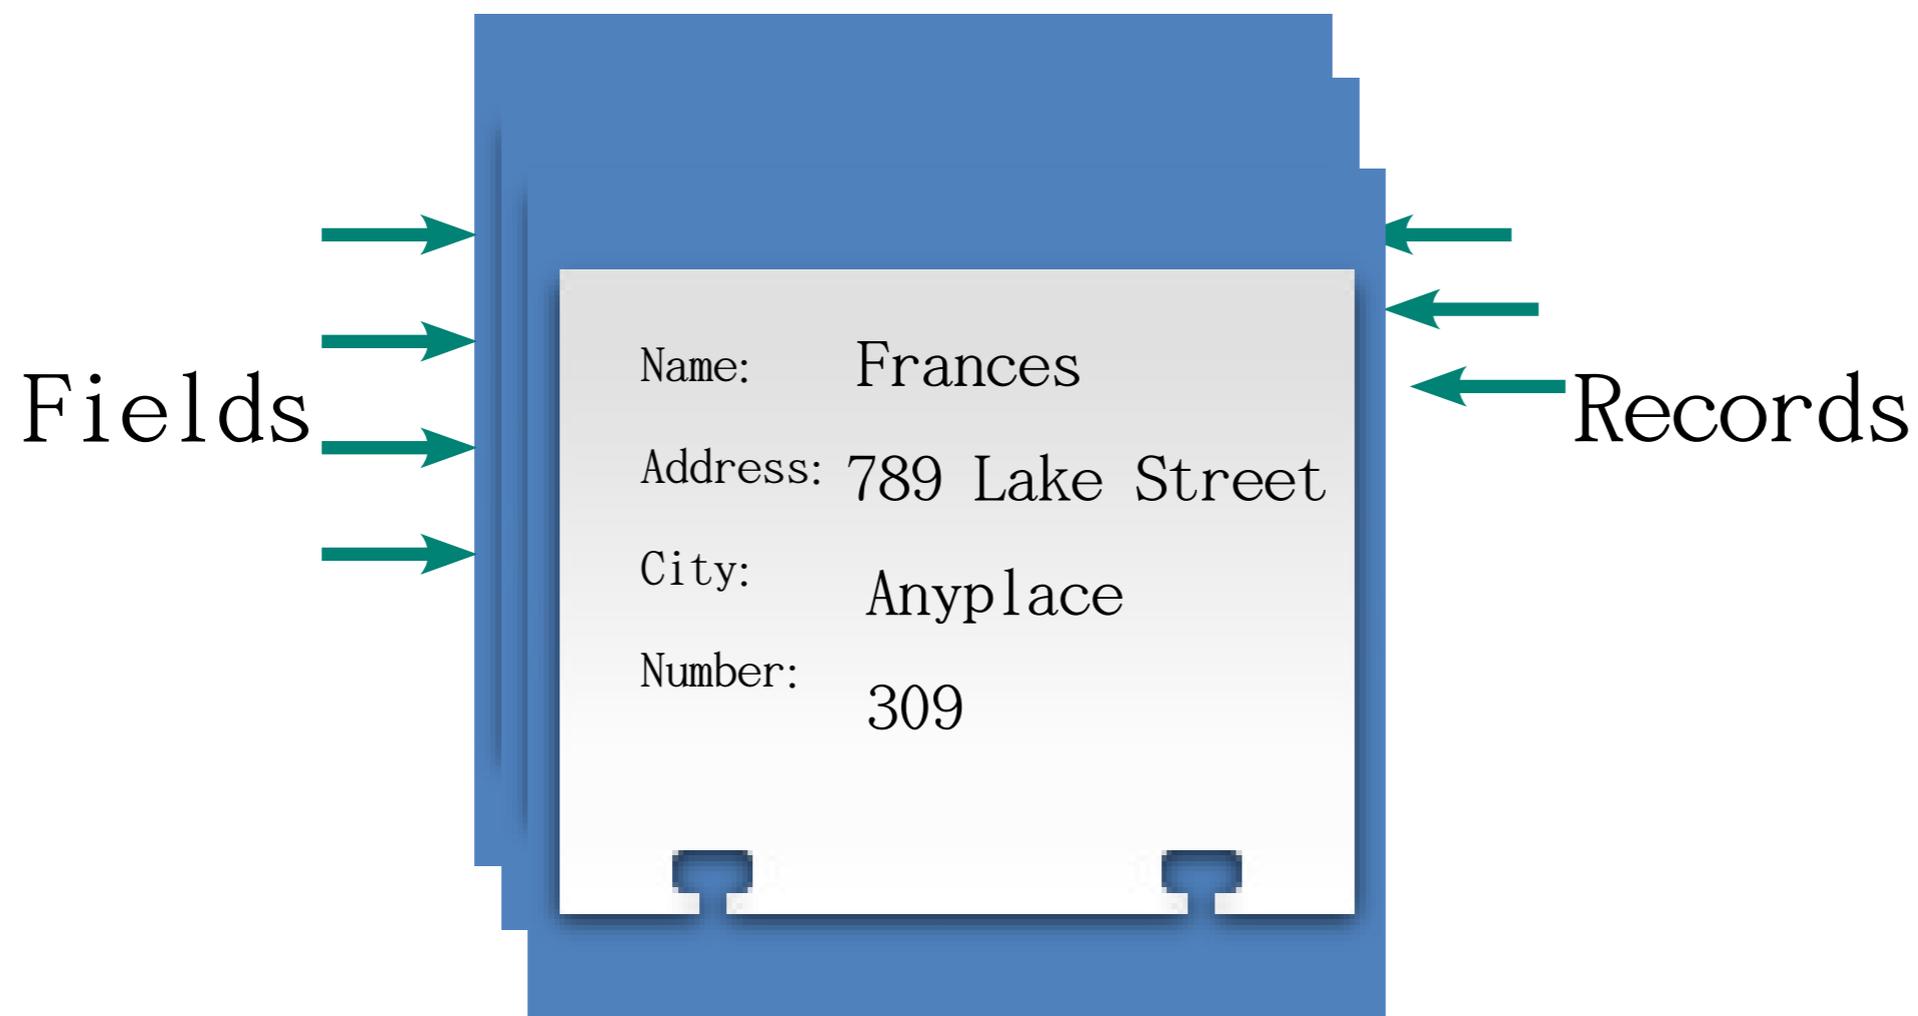

PEO Table	First Name	Last Name
PEO 001	Byron	Songer
PEO 002	Martha	Songer

TEL Table	Number	Type
TEL 001	254-3371	Office
TEL 002	558-8219	Mobile

# Database Example

- *From the aspect of icons*

# Database Examples

Address Book

iCalendar

iPhoto

iTunes

Each application helps  
with managing  
the data of  
your life

# FAQ - 1

- *What is a database?*

- *A database is a method of organizing and analyzing information.*

- *Why use a database?*

- *A database doesn't just hold information—it helps you organize and analyze the information in different ways.*

# FAQ - 2

## • *How is a database organized?*

*\* A database file is organized into one or more tables. Tables store records. Each record is a collection of fields.*

## • *How is field data displayed?*

*\* Fields are displayed on layouts. Each layout is based on a single table, and displays records from that table*

# FAQ - 3

## • *FileMaker Pro basics*

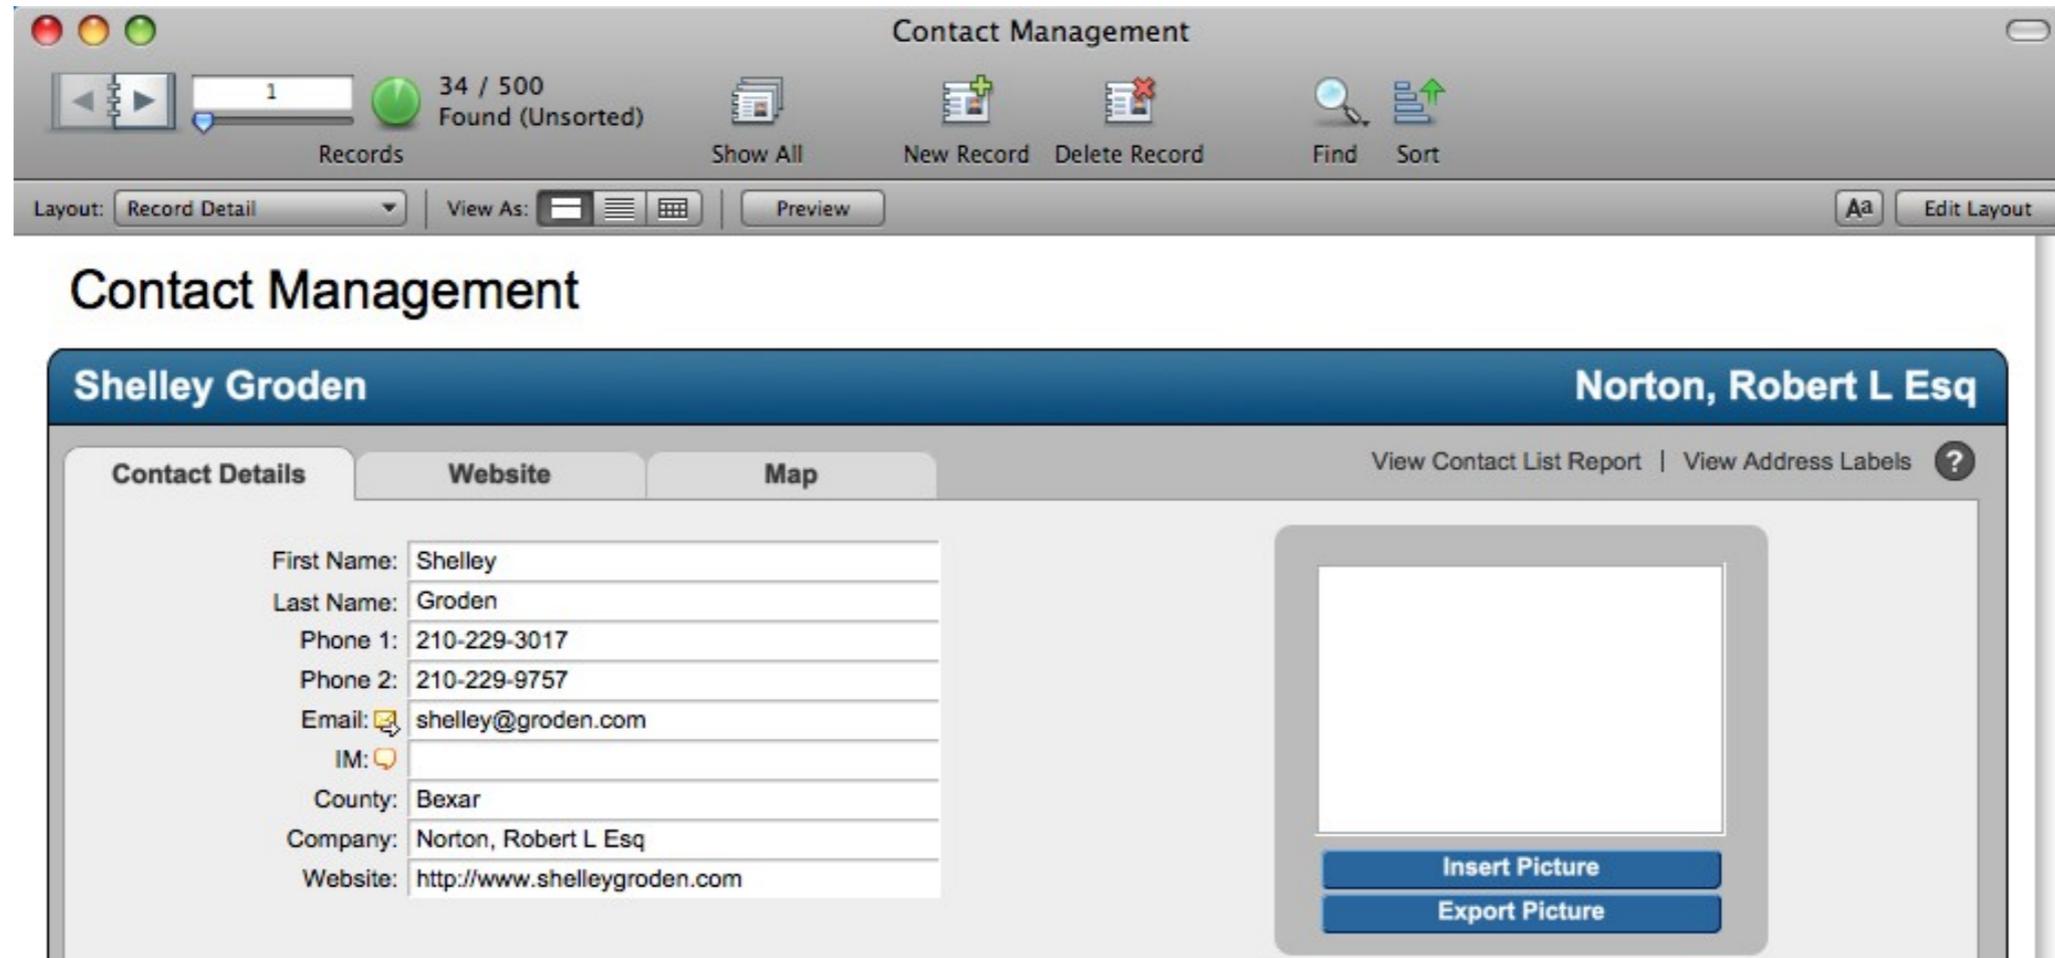

\* *FMP is a cross-platform application. Files created on a Mac can be opened in Windows, and vice versa.*

\* *FMP saves your work automatically. So, carefully consider your actions, especially when deleting records. Once deleted, they are*

# FAQ - 4

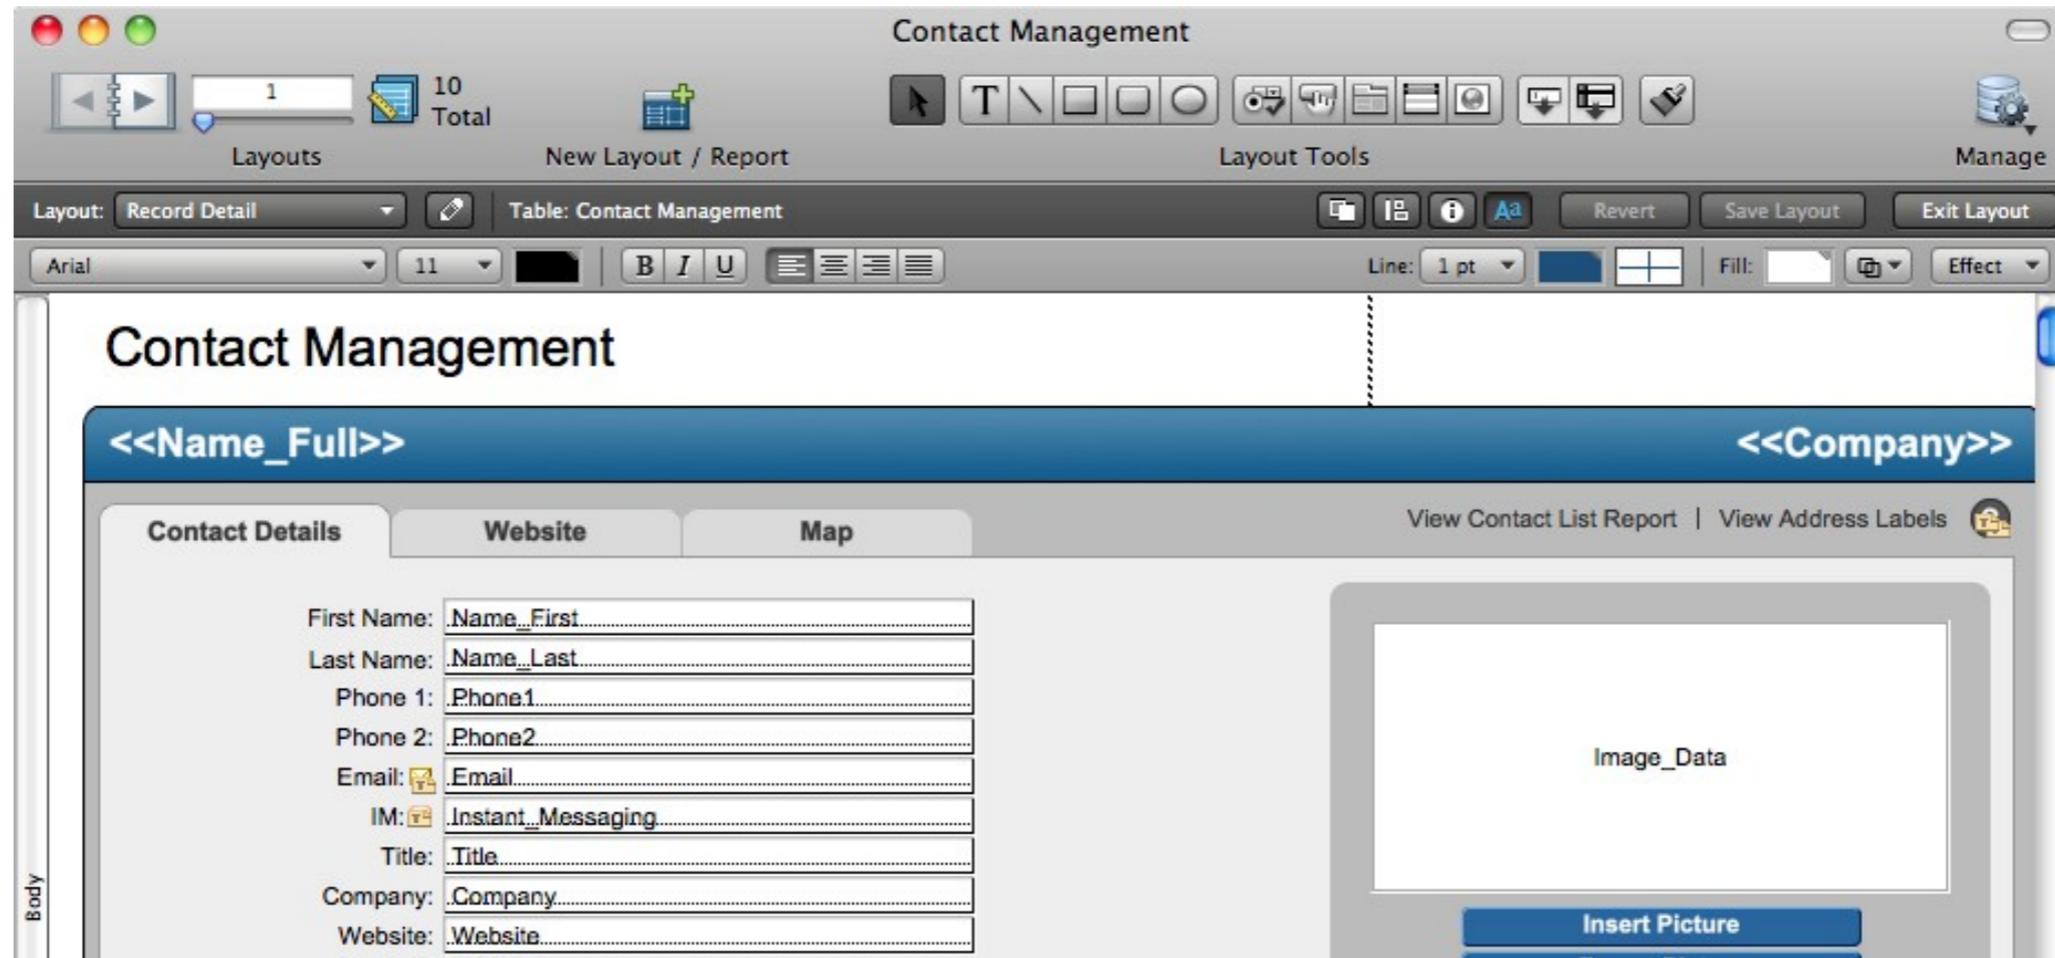

- *When you work in FileMaker Pro, you work in one of four modes.*
  - ***Browse** – enter data and view records.*
  - ***Find** – locate a record or a group of records quickly.*
  - ***Layout** – design how information will appear on screen or for printing.*
  - ***Preview** – see how pages will*

# Status Toolbar

- Commonly used features at your fingertips with the redesigned interface. – *Browse Mode*

# List View

The screenshot displays a web-based contact management application. At the top, the window title is "Contact Management". Below the title bar, there is a navigation area with a "Records" section showing "228" records out of "500 / 500 Found (Unsorted)". To the right of this are buttons for "Show All", "New Record", "Delete Record", "Find", and "Sort". Below the navigation area, there are options for "Layout: Record List" and "View As" (with icons for list, grid, and preview), along with a "Preview" button and "Aa" and "Edit Layout" options.

The main content area is titled "Contact Management" and includes links for "View Contact List Report" and "View Address Labels". Below this is a table with the following columns: Name, Email, Phone, and Company. Each row represents a contact and includes a red triangle icon on the left. The table lists 13 contacts with their respective email addresses, phone numbers, and companies.

Name	Email	Phone	Company

At the bottom of the window, there is a status bar showing "100" and a "Browse" button.

# Table View

The screenshot shows a 'Contact Management' application window. At the top, there are window controls and a title bar. Below the title bar, there is a toolbar with icons for navigation (back, forward, search), a record count '500 / 500 Found (Sorted)', and buttons for 'Show All', 'New Record', 'Delete Record', 'Find', and 'Sort'. A secondary toolbar includes a 'Layout' dropdown set to 'Record Table', 'View As' icons, a 'Preview' button, and a 'Modify...' button. The main content area is titled 'Contact Management' and contains a table of contact records. The table has columns for Name\_First, Name\_Last, Company, Phone1, Phone2, Email, Street1, and City. The records are sorted by Name\_First. At the bottom of the window, there is a status bar with a 'Browse' button and a scrollbar.

Copy Paste Import...

Print... Cancel OK

# Defining Fields

# Relationship Graph

# Other Features

- ✦ Organize a layout with grouped fields on tabbed objects
- ✦ View web pages within FileMaker layouts
- ✦ Sharing:
  - ✦ FMP file on your local network
  - ✦ Instant Web Publishing

# Buttons

- ✦ Any object can be a button
- ✦ Buttons performs tasks
  - ✦ Go to a different layout
  - ✦ Sort data in a particular way
  - ✦ Hand off an email address to email application
  - ✦ Performs a custom script

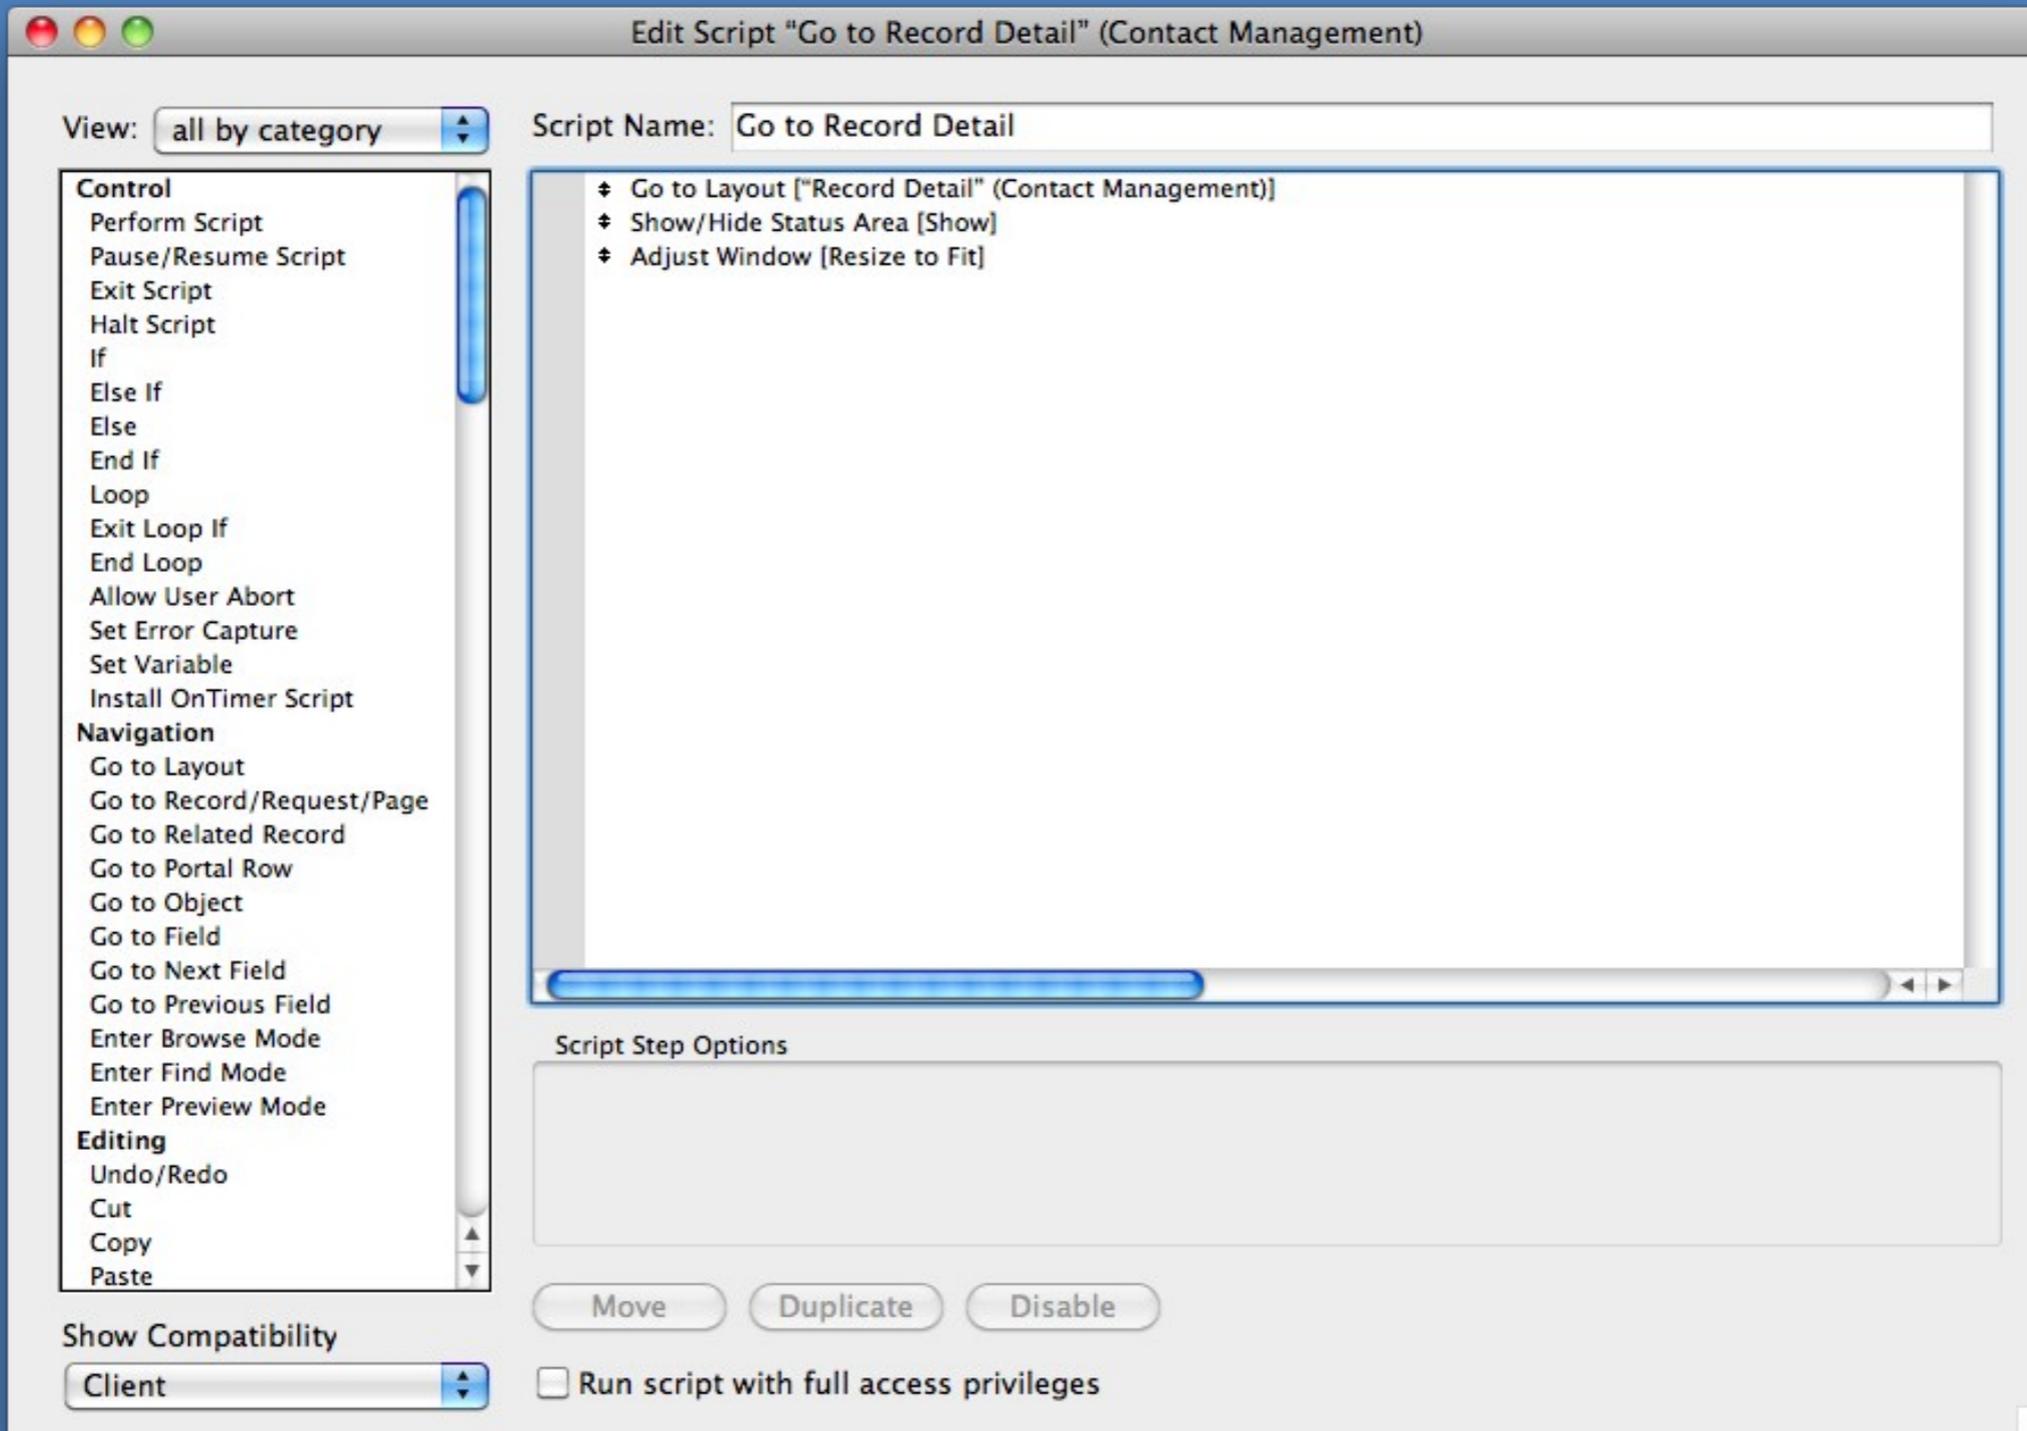

# Scripts

- Perform a sequence of commands
- User- or developer-constructed series of instructions to perform.
- Like buttons, scripts allow automation of menu commands and/or activate commands not found in a menu structure.

# Scripts

- ✦ Simple scripts perform a single task
- ✦ Complex scripts might combine elements for:
  - ✦ User feedback and control
  - ✦ Programming techniques such as branching and looping
  - ✦ Powerful, dynamic instruction sets that accomplish large tasks

# Simple Script

# Complex Script

Script Name: Transfer Text Loop Script

**Control**

- Perform Script
- Pause/Resume Script
- Exit Script
- Halt Script
- If
- Else If
- Else
- End If
- Loop
- Exit Loop If
- End Loop
- Allow User Abort
- Set Error Capture
- Set Variable
- Install OnTimer Script

**Navigation**

- Go to Layout
- Go to Record/Request/Page
- Go to Related Record
- Go to Portal Row
- Go to Object
- Go to Field
- Go to Next Field
- Go to Previous Field
- Enter Browse Mode
- Enter Find Mode
- Enter Preview Mode

**Editing**

- Undo/Redo
- Cut
- Copy
- Paste

**Script**

```
⚡ # Find the set of students to apply the observations (Where _st Student Observe Selected = 1)
⚡ Enter Find Mode []
⚡ Set Field [Students::_st Student Observe Selected; 1]
⚡ Set Field [Students::_kf Teacher ID; $$teacherID]
⚡ Perform Find []
⚡ # Test for found students
⚡ # (Test for selected students before going to the observations layout; this is a double-check.)
⚡ If [not Get ( FoundCount )]
⚡ # No found students - drop out of script with a dialog
⚡ Go to Layout ["Teacher Home View AM" (Teachers)]
⚡ Show Custom Dialog ["Error"; "It appears that you have not selected any students to apply the observations"]
⚡ Halt Script
⚡ End If
⚡ # Start with the first record of the found set of students
⚡ Go to Record/Request/Page [First]
⚡ Loop
⚡ # RECORD LOOP
⚡ # Initialize field counter with each new record
⚡ Set Variable [$fieldNum; Value:1]
⚡ Loop
⚡ #FIELD LOOP
⚡ #Set the field name from the field list according to the field number counter
⚡ Set Variable [$field; Value:GetValue ( $fieldNameList ; $fieldNum )]
⚡ #Set the TO-fieldName for the loop (student table) field
```

Script Step Options

Specify...

Clear Duplicate Disable

Run script with full access privileges

# Let's Review - A

- A database file is organized into one or more \_\_\_\_\_. Tables store \_\_\_\_\_. Each record is a collection of \_\_\_\_\_.
- Work in FileMaker Pro is saved \_\_\_\_\_.
- Buttons \_\_\_\_\_ tasks.
- Scripts perform a \_\_\_\_\_ of commands.

# Let's Review - B

- There are four modes:
  - Browse is where you enter \_\_\_\_\_ and view \_\_\_\_\_.
  - Find allows you to locate a \_\_\_\_\_ or a \_\_\_\_\_ of records.
  - Layout is for \_\_\_\_\_ how information will appear.
  - Preview lets you \_\_\_\_\_.
